INTRODUCTION

Congratulations on your purchase of the Rosco V-Hazer. Designed to meet the varied demands of projects ranging from concert tours, theatrical productions and theme parks to feature films, television broadcasts, and photo shoots, the V-Hazer offers the perfect balance of performance, reliability & affordability, and delivers smooth even haze with just the right hang time.

To ensure efficient and safe operation, please take a few moments to read this manual completely.

The Rosco V-Hazer is a thermal aerosol generator designed for continuous, variable haze output. This machine is one part of a system, the other component being Rosco V-Hazer Fluid. All Rosco Fog and Haze Fluids are unique, water-based formulations that contain no petroleum distillates and are safe when used according to instructions. The operating temperature, pump pressure, and output nozzle of the V-Hazer have been specifically designed and engineered together to maximize the aerosolization of the Rosco V-Hazer Fluid.

Do not use any fluids in the V-Hazer other than genuine Rosco V-Hazer Fluid, as they have not been tested for optimal performance and safety considerations. Doing so may damage the machine and will void the warranty.

The Rosco V-Hazer has been tested for use in professional theatrical productions and is included under the Equipment-Based Guidelines of the Equity-League Pension and Health Trust Funds. The Rosco V-Hazer is also compliant with the Alliance of Motion Picture and Television Producers Safety Bulletin #10. Note: The terms “fog,” “haze” and “smoke” are used interchangeably throughout this manual. Rosco Fog Equipment does not produce actual smoke, only a mist or aerosol.

IMPORTANT SAFEGUARDS

READ AND UNDERSTAND THESE SAFETY PRECAUTIONS BEFORE OPERATING THE MACHINE. FAILURE TO PROPERLY FOLLOW THESE PRECAUTIONS MAY LEAD TO A FIRE, ELECTRICAL SHOCK, OR BURNS.

FOG FLUID HEALTH CAUTION: VAPOR FROM THIS FLUID, LIKE ANY OTHER COMMON MATERIAL IN A VAPORIZED STATE, MAY BE IRRITATING TO OR CAUSE ALLERGIC SYMPTOMS IN SOME PERSONS WITH ALLERGENIC SENSITIVITY. DO NOT EXPOSE AT CLOSE RANGE TO KNOWN ASTHMATICS.

The following symbols are used to identify important safety information:

- Caution! Burn hazard. Hot surface. Do not touch.
- Danger! Hazardous voltage. Contact will cause electric shock.
- Caution! Fire hazard.
Preventing Electric Shock

• This machine uses electrical power at common commercially available voltages. When directly contacted, such voltages are hazardous to human life. All precautions commonly applicable to the use of electric power generally are applicable to the use of this machine.
• This machine is designed to operate from three-wire power systems where one of the wires is a safety ground. DO NOT disconnect the safety ground or use extension cords or “cheater” plugs to connect this machine to a two-wire system. Operation without a safety ground may result in a hazardous electrical shock.
• Check the current and voltage rating of your machine. Extension cords must be properly sized and rated for voltage, current and length. Check your local electrical code for the correct gauge extension cord. If an extension cord shows signs of wear or gets warm to the touch, discontinue its use and obtain a cord with a higher current rating. Improper extension cords are not only hazardous, but may result in poor machine performance due to excessive voltage drop.
• Never use any machine that shows signs of improper use. Even slight damage may be an indication of a major problem. If the machine looks questionable, use it only under strict observation. If the machine shows any unusual behavior, disconnect machine immediately from power and send machine to a Service Center for repair.
• Disconnect unit from power source before servicing and when not in use.

Preventing Burns and Fire

• During the warm-up phase and during operations, people should not stand within three feet (one meter) of the front of the machine. Flammable material like paper, fabric, etc., should never be placed directly on or around this equipment, or any other electrical device with a heating element.
• The fog should be blown into an open space and should not be directed at people or objects. Never blow fog on hot surfaces, into glowing heating elements or into open flames. The normally non-flammable and non-toxic fog could react on very hot surfaces and be burnt or decomposed.
• Do not operate the machine in a tightly confined space where the ambient temperature might exceed 135° F (57° C). A continuous flow of air is required to maintain temperature within the machine housing. Sensitive electronic components deteriorate rapidly under high heat conditions. Operation of the machine in an enclosure of less than ten cubic feet (one cubic meter) is dangerous, and automatically voids the warranty.
• Enclosing any heating device so it is invisible to the operator creates a potential fire hazard, no matter what the ambient temperature of the enclosure. To do so with any high-amperage device is to assume substantial risk. Rosco strongly recommends against it.
Safety Precautions

- In any facility, the fog concentration should be controlled. The fog should never mask emergency exits, safety signs, staircases or other safety constructions.
- After long use, or if the machine is not properly set, some liquid droplets or wet area may appear in front of the machine’s outlet. This liquid should be wiped up to prevent a condition where someone might slip and fall.

Preventing Improper Operation

- Unauthorized repair or alteration of any safety devices can lead to improper operation and accidents. Repairs should be performed only by an authorized Service Center.

- Use of any fluid other than Rosco fog fluids or modification or attempted unauthorized repair of the machine will immediately invalidate the warranty.

- Machines are designed for continuous use over an 8-hour day, but to protect components, it is wise to turn off the machine when it is not in use. In permanent installations, it is advisable to equip the circuit with a night cut-off device.

Additional Precautions: Do’s & Don’ts

- Do Read the entire manual before operating the machine and pay particular attention to all CAUTIONS AND WARNINGS.
- Do Use an extension cord that is properly rated for voltage, current and length, and is free from nicks, cuts or other signs of wear.
- Do Check to see that the machine is clean and free of foreign objects before each operating period.
- Do Ensure that the machine is adequately ventilated.
- Do Use proper caution when handling hot surfaces.
- Do Use the minimum amount of haze required to achieve the desired effect.
- Do Not Use the machine near a person who has asthma or similar inhalation disorder.
- Do Not Use any foreign substances in the machine.
- Do Not Use a machine that is damaged or operating improperly in any way.
- Do Not Use a machine that leaks fluid from the housing.
- Do Not Leave the machine switched on for prolonged periods of time without producing haze.
- Do Not Enclose the machine.
- Do Not Install the machine in such a fashion that the operator cannot see the whole machine, including the indicator lights.
- Do Not Touch the shielded nozzle of the machine. Allow sufficient cooling time after operation before attempting to perform maintenance or storage.
- Do Not Direct the haze output continuously against nearby surfaces. This may eventually cause fluid to re-condense.
UNPACKING

Your Rosco V-Hazer requires no assembly. Note: 230 volt machines are shipped with bare leads at the end of the power cord. A proper electrical connector must be attached based on the local power requirements. Carefully remove the machine from the box. Ensure that no tape or packing materials are stuck to the machine. Stray packing materials that remain attached to high temperature areas of the machine could melt or burn during operation. In particular, ensure that the area around the nozzle is free of any materials or debris.

CONTROLS

Heat Indicator
A red indicator light that illuminates when machine is heating in order to achieve optimal temperature for producing fog.

Ready Indicator
A green indicator light that illuminates when the minimum temperature for producing fog has been achieved. Note: All indicator lights will switch off if Standby mode is engaged.

Multi-Link Socket
3-Pin XLR socket that allows for multiple machines to be daisy chained together and controlled from a single Remote Control Panel.

Main Power Switch
Turns unit on or off by controlling the flow of power to the unit.

Remote Thumb Screws
Loosen to remove

Power Cable

DMX Panel & Display

Fluid Bottle

Air-Input / Purge Connection
This is a push-to-connect inlet that accepts ¼”OD tubing and allows compressed air to blow through the heat exchanger for cleaning and maintenance.

“Set” Button
Press to store the DMX address shown on the display.

“Up” Button
Press to increase the value of the DMX address. Press and hold for faster incrementing speed.

“Down” Button
Press to decrease the value of the DMX address. Press and hold for faster decrementing speed.
**CONTROLS**

**Fog Level Knob**
Rotate to set the desired amount of haze output. Higher numbers indicate more haze. Output is controlled by pump speed increasing and sending more haze fluid into the heat exchanger.

**Fog Button**
Press and release to start making haze. Press and release again to stop making haze. Not required when using DMX control. *Note: The Fog Button is disabled if Standby mode is engaged.*

**Fog Off Knob**
Used only when timer control is engaged. Rotate to set the desired time interval that the machine will wait while NOT producing haze.

**Fog On Knob**
Used only when timer control is engaged. Rotate to set the desired time interval that the machine will produce haze. During haze production, the Power Indicator light will flash.

**Power Indicator**
A red indicator light that illuminates when the Main Power Switch is in the “On” position to indicate the machine is properly receiving power and Standby mode is disengaged. The red Power Indicator light flashes while haze is being produced.

**Standby Button**
Press and release to suspend heating and operation of the machine without turning off the Main Power Switch. The Power Indicator light on the Remote Control Panel will go out when in Standby mode. Press and release again to disengage Standby mode. Once Standby mode is disengaged, the Power Indicator light on the Remote Control Panel will come back on.

**Timer Indicator**
A green indicator light that illuminates when Timer mode is engaged by pressing the Timer Button. Turns off when Timer mode is disengaged.

**Timer Button**
Press and release to engage the timer control functions. Timer Indicator light will come on. Press and release again to disengage timer functions. Timer Indicator light will go out. *Note: The Timer Button disabled if Standby mode is engaged.*
**SETTING UP**

The Rosco V-Hazer should be located on a secure, solid surface such as the floor. The machine can operate in any orientation from 45 degrees upwards to 45 degrees downwards. Take precautions to avoid fluid spills if the machine is oriented at an angle.

**Fluid Set Up**

*Only use genuine Rosco V-Hazer Fluid in your V-Hazer. The use of any other fluid will void your warranty, may damage the equipment, and may cause health hazards.*

For convenience, the V-Hazer is designed with an integral compartment that will hold a 4-Litre or 5-Litre bottle of V-Hazer Fluid. Place the fluid bottle into the compartment. Feed the fluid inlet hose into the bottle of V-Hazer Fluid, ensuring that the filter located at the end of the tube is fully submerged in fluid. Slide the bottle cap along the tube and tighten the cap onto the bottle. Take precautions to avoid fluid spills.

All Rosco fog and haze machines are primed at the factory with a small amount of fluid. No additional priming should be necessary for proper haze output. If haze output is diminished or intermittent, see the Priming the System section of this manual for instructions on how to re-prime the fluid path.

**Power Connections**

Ensure that the machine is plugged into an outlet rated for the proper voltage and amperage. The V-Hazer is a 900 watt device and will draw 4A at 230 VAC or 8A at 115 VAC. *Note: 230 volt machines are shipped with bare leads at the end of the power cord. A proper electrical connector must be attached based on the local power requirements. If unsure how to do this, please contact Rosco or your local Rosco dealer for assistance. An example of properly wiring a UK 13A connector is shown below.*
OPERATING THE MACHINE

Powering On
Make sure the unit is plugged in. Turn on the Main Power Switch that is located next to the power cord on the rear of the machine. The red Power Indicator light on the Remote Control Panel will illuminate. If the Power Indicator light does NOT illuminate, press and release the Standby Button on the Remote Control Panel.

Heating
When switched on, the red Heat Indicator light will illuminate and the machine will begin to heat up to its optimal temperature. The initial heating cycle will take 7-10 minutes. When the green Ready Indicator light comes on, the machine is ready to make haze. Note: If no remote is connected and no DMX signal is detected, the machine will not heat.

Control Options
There are several methods of controlling the V-Hazer, including: Manual Control via the Remote Control Panel, DMX control via a lighting console and Multi-Link control that allows multiple machines to be controlled from a single Remote Control Panel.

Manual Control via the Detachable Remote Control Panel that is included with each machine. An operator can control the unit at the machine, or from a distance using the included 3-pin cable. The Remote Control Panel can be used to set haze output volume, power the machine on and off using Standby mode, and set a repeating, timed cycle of on/off operation.

DMX Control from your lighting desk is available as a standard option. The V-Hazer will use 2 channels of DMX control: Channel one controls haze output volume and channel two controls fan speed.

Multi-Link allows up to 4 machines to be linked together via 3pin XLR cables (not included) and controlled by a single Remote Control Panel.

Using the Remote Control Panel
The Remote Control Panel can be operated directly on the machine or detached from the unit and used at a distance. To detach the Remote Control Panel from the unit, loosen the thumb screws and lift the panel from its recessed mount. A 15 foot (4.5m) cable is provided to allow the machine to be operated at a distance. If needed, a longer 3-pin XLR cable can be used or joined to the existing cable. Do not exceed a maximum distance of 165 feet (50 m) from remote to machine.

When the green Ready Indicator light is illuminated, the V-Hazer is ready to make haze. Press and release the Fog Button to begin producing haze. The red Power Indicator light will flash to indicate the machine is operating. To stop making haze, press and release the Fog Button again.

Adjust the Fog Level Knob to increase or decrease the amount of haze produced. Note: When controlling the V-Hazer via the Remote Control Panel, fan speed is always set to maximum. To independently adjust output volume and fan speed, use DMX control.
To ensure silent operation when not in use, the fan of the V-Hazer will automatically shut-down after 30 seconds of inactivity. The fan will come back on when the machine begins to produce haze again.

The Standby Button allows the machine to be “turned off” from the remote without using the Main Power Switch. In Standby mode, the machine will not reheat or make haze, the fan and pump will remain unpowered and all indicator lights will switch off. To engage Standby mode, press and release the Standby Button. The red Power Indicator light will turn off. To disengage Standby mode, press and release the Standby Button again and the red Power Indicator light will turn back on. Once Standby mode is disengaged, the machine will immediately start heating in preparation to make haze. Note: If no remote is connected and no DMX signal is detected, the machine will not heat.

Using Timers
The timer controls allow you to set the machine to produce haze in timed intervals without an operator. To engage the timers, press and release the Timer Button. The green Timer Indicator light will illuminate, the machine will begin to produce haze at the level set by the Fog Level Knob, and the red Power Indicator light will flash to indicate the machine is operating.

Rotate the Fog On Knob to adjust the period of time that the machine will produce haze before stopping. The numeric settings on the timer knobs are relative settings and do not correspond to specific seconds or minutes. See the table below for an approximation of the time duration corresponding to each tic on the knob.

Rotate the Fog Off Knob to adjust the period of time that the machine waits before starting to produce haze again. The numeric settings on the timer knobs are relative settings and do not correspond to specific seconds or minutes. See the table below for an approximation of the time duration corresponding to each tic on the knob.

The machine will cycle on and off indefinitely until the Timer Button is turned off. If the Fog Button is pressed while in Timer mode, this will override any timer settings and the machine will produce haze. When the Fog Button is disengaged, the timer settings resume, continuing its On/Off cycle as if not interrupted.

Using DMX Control
The V-Hazer can be operated using DMX control from a lighting console or other DMX device. Two channels of DMX control are required.

Connecting the DMX
Connect the V-Hazer to your DMX chain by inserting a 5-Pin XLR DMX cable into the DMX-IN socket located on the DMX Panel. A DMX-OUT port allows additional DMX devices to be added to the chain downstream of the machine. Note: The V-Hazer is not a self-terminating device; a DMX terminator should be used in the DMX-OUT port when the unit is the last device in the chain.
It is not necessary to have the Remote Control Panel attached when controlling the machine via DMX. However, if no Remote Control Panel is attached, and no DMX signal is present, the machine will not heat up. It is not necessary to send a command via DMX to start the heating process. Once a valid DMX signal from an appropriate DMX control device is detected, the V-Hazer will begin its heating process.

Setting the DMX Address
The V-Hazer uses two channels of DMX. To set the starting DMX address of the machine, press either the UP or DOWN arrow on the DMX panel to activate the display. Then, press the UP or DOWN Button again to change the value until the desired address is displayed. Holding down the UP or DOWN Button will rapidly scroll the values in the direction desired. Press the “Set” Button to store the address. The address you set will be remembered after the unit has been switched off. The machine has now been assigned the DMX address you have selected and the next increment value as well. For example, a V-Hazer set to DMX Address 14 will use DMX channels 14 and 15.

DMX Operation
The V-Hazer is designed to produce an optimal haze effect with its internal fan speed set to maximum and the output volume adjusted to achieve the desired density of haze. However, with DMX control, an effects designer can fully customize the haze effect by adjusting fan speed independently of the haze volume.

The first channel assigned (based on DMX address) is the output volume control, which controls the pump speed. The table below indicates the haze output level at various DMX values. The second channel assigned (based on the DMX address) controls the fan speed. In making a good haze, the fan speed influences the relative scattering of the fog particles into a smooth and even haze. As the output of particles increases, a greater fan speed is important in order to evenly distribute the particles. If the fan speed is too slow, the effect will more closely resemble billowing fog. See the table below, which indicates the fan speed at various DMX values. Note: Fan speed will never drop below a preset minimum speed while haze is being produced.

Using Multi-Link

In some instances, it may be preferable to control and synchronize multiple machines from a single Remote Control Panel. This can be quickly and easily accomplished using the V-Hazer’s built-in Multi-Link capabilities. Up to four Rosco V-Hazer’s can be connected and controlled via a single controller.

Connect a 3-pin XLR cable (not included) to the Multi-Link port on the rear of the first machine in the daisy chain. This unit becomes the “Head Machine” and its Remote Control Panel will control the other units in the chain.

Remove and detach the Remote Control Panel and its 3-pin XLR cable from the second machine. Connect the plug of the cable from the Head Machine into the remote port of the second machine where the Remote Control Panel had previously been connected.

Repeat this process to connect a third and/or fourth machine. No additional set-up is required. The Remote Control Panel attached to the head machine will operate all machines in the Multi-Link as if they are the same.

Note: The maximum length of the daisy chain, from the remote of the Head Machine to the final machine is 165 feet (50 m).

Changing Fluid

The V-Hazer consumes 0.9 litres of fluid per hour at its maximum rate. When the fluid in the bottle has been depleted enough that the tube can no longer stay submerged, it is time to change fluid bottles.

It is recommended that you stop making haze when changing fluid bottles. Once haze production has halted, simply unscrew the fluid tube cap from the empty bottle and remove the tube. Take care to avoid dripping fluid onto the machine or onto the floor nearby, as it can be slippery. Replace the empty bottle with a new bottle of Rosco V-Hazer Fluid, insert the fluid tube insuring that the filter at the end of the tube is fully submerged, and reattach the fluid cap. Resume making haze.

</table>

Additional help and information can be found on our website at www.rosco.com or by contacting Rosco or your local Rosco dealer.
MAINTENANCE

Before servicing the Rosco V-Hazer, read and observe all the precautions listed in the Important Safeguards section on pages 2-4 of this manual. **Note: Any service that is NOT described in the section below must be carried out by a Rosco service technician. Contact Rosco or your local Rosco dealer for more information on your repair and service needs.**

**Exterior Cleaning**

Excessive dust, fluid residue, and dirt build-up will degrade the performance of the machine and may cause overheating to occur. To maintain adequate air flow and cooling, the outer casing and air vents of the machine must be cleaned periodically. Damage caused by lack of cleaning is not covered by the product warranty.

- Unplug the machine from power and allow the unit to cool completely before cleaning. **Note: The output nozzle may remain hot for up to 10 hours after use.**
- Remove dust from the air vents with a soft brush, cotton swab, vacuum or compressed air.
- Clean any fluid residues from the haze output area of the machine using a damp cloth.
- Clean the outer casing with a damp cloth only.

**Maintaining the Heat Exchanger**

The heat exchanger is the core element in a fog or haze machine that transforms fluid into an aerosolized fog/haze. This component operates under extreme temperatures and pressures and should be cleaned periodically to ensure optimal performance. The Air-Input Connection was designed to provide a fast and efficient method of cleaning the heat exchanger by purging it of residual fluid and build up using compressed air. For lasting performance, Rosco recommends purging the heat exchanger once a week while in production, and before storing the machine for extended periods of time. Rosco does not recommend the use of any purified waters, chemicals or fog machine cleaners. Use of these materials will void the warranty.

**Using the Air-Input Connection**

You must have a source of compressed air from an air compressor or external air tank available. Compressed air must be clean and dry.

Allow the machine to heat until the green Ready Indicator light has illuminated. Using the push-to-connect fitting, connect a ¼” OD tube from your air source by inserting the tube into the Air-Input Connection located on the rear panel of the machine. Alternately, you can use a blow gun attachment, or similar device with a stepped nozzle, that is held against the orifice of the Air-Input Connection.

Set the air pressure to a maximum of 60 psi. Higher air pressure may damage the internal plumbing components. Blow air into the Air-Input Connection for 30 seconds, or until no additional haze or fluid exits the nozzle.

**CAUTION: Keep people and objects at least 3ft (1mv) away from the nozzle of the machine during air purging.**

To release the tubing from the push-to-connect fitting, push back on the fitting collar and pull to release the air line.
Storage & Shipment
Before storing the machine for an extended period of time, ensure the following:

• Fluid bottle has been removed and securely capped
• Proper cleaning of exterior as described above
• Proper purging of the heat exchanger as described above
• Machine is properly boxed or covered to avoid dust build up on internal components
• If shipping, use original packaging or comparable protection to avoid damaging the machine in transit

1 YEAR LIMITED WARRANTY

Rosco Laboratories warrants to the first retail purchaser that this Product will be free from defects in workmanship and material for a period of twelve (12) months from the date of original purchase. For warranty service you must be able to provide proof of purchase.

Should this Product prove defective during the warranty period, please contact your local Rosco office for return authorization. No warranty service will be performed without Return Authorization. At Rosco's sole discretion, covered Products will be repaired or replaced with new or refurbished equipment or a model of like kind and quality. Exchanged or replaced parts and Products assume the remaining warranty period of the original Product covered by this limited warranty.

You are responsible for securely packaging the defective Product and returning it to Rosco as per the instructions on the Return Authorization. Within North America, Rosco will ship the repaired or replaced Product to you freight prepaid. Shipments to other locations will be made freight collect. Do not return fog machines with fog fluid.

This warranty is not transferable and does not extend beyond the first retail purchase of the Product. This warranty does not cover damage to the Rosco product caused by parts not manufactured, distributed or certified by Rosco. Rosco is not obligated to provide warranty service should the product fail to be properly maintained or fail to function properly as a result of misuse, abuse, improper installation, neglect, improper shipping, damage caused by disasters such as flood, fire and lightning, improper electrical current or connection or service other than by a Rosco Authorized Servicer. If a claimed defect cannot be identified or reproduced, you will be held responsible for the costs incurred.

Unless otherwise stipulated by state law, all warranties expressed or implied are limited to the twelve (12) month period of this warranty.

THE WARRANTY AND REMEDY PROVIDED ABOVE ARE EXCLUSIVE AND IN LIEU OF ALL OTHER EXPRESS OR IMPLIED WARRANTIES INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY, NON-INFRINGEMENT OR FITNESS FOR A PARTICULAR PURPOSE. EXCEPT AS PROVIDED IN THIS WRITTEN WARRANTY AND UNLESS EXCLUSIONS ARE SPECIFICALLY FORBIDDEN BY STATE LAW, NEITHER ROSCO NOR ITS AFFILIATES WILL BE LIABLE FOR ANY LOSS, INCONVENIENCE, OR DAMAGE, INCLUDING DIRECT, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES, INCLUDING INJURY TO PERSONS OR PROPERTY, RESULTING FROM THE USE OR INABILITY TO USE THE ROSCO PRODUCT, WHETHER RESULTING FROM BREACH OF WARRANTY OR ANY OTHER LEGAL THEORY.

• NOTE: USE OF ANY FLUID OTHER THAN A ROSCO BRAND FLUID WILL VOID THE WARRANTY.
EC Declaration of Conformity

Date: 1 April 2014

Manufacturer: Rosco Laboratories, Inc.

Address: 52 Harbor View Avenue, Stamford, Connecticut 06902, U.S.A.
Tel: (203) 708 8900  Fax: (203) 708 8919  Em: info@rosco.com

Product Name: Vapour, V-Hazer, Vapour Plus

Product Type: Smoke Effects Machine

These products meet the requirements, where applicable, of the following EC Standards and as such, comply with the EMC and LVD directives of the European Community:

EN 61000-6-3:2007  Generic Emission Standard for residential and light Industrial environments.
EN 61000-6-1:2007  Generic Immunity Standard for residential and light Industrial environments.
60335-1:2002+A15:2011 Safety of household and similar electrical appliances
BS EN 62233:2008  Electromagnetic fields.

These standards reference the following European standards:

**Emissions:**
EN 55 022 /B  RF voltage and field strength
EN61000-3-3  Flicker
EN 55 014  RF voltage (discontinuous)

**Immunity:**
EN 61000-4-2  Electrostatic discharge to case
EN 61000-4-4  Common mode fast transients (AC and DC ports)
EN 61000-4-5  Surge
EN 61000-4-11 Voltage dips and interruptions
EN 61000-4-6  RF common mode

These standards also meet the requirements of CISPR 22 and 14.
